EMBEDDED LIBRARIAN PROGRAM

What is it?

JWU Librarians are embedded in ULearn course sites.

We currently support **98** course sections.

What do embedded librarians do?

Add links to academic resources including articles, eBooks, databases and websites.

Create course-specific online guides to reinforce important concepts.

Create tutorials demonstrating use of online resources and information literacy topics.

Host discussion forums on research topics and answer students' questions via email or chat.

How does this help students?

Research shows that library use increases student success. Bring the “library” to ULearn.

Embedded librarians are an additional support system for research and citation questions.

Research anxiety can cripple a student's ability to learn and succeed. Let us help!
