Prioritized Pallet

This project assigned was to choose an area that we understand a lot and to create an idea to help that field. I chose to do plastic waste in the retail world, specifically in The Home Depot. I created a prototype in which products are put on a pallet, then is covered by a wooden cover that would be strapped to the pallet to create a chest like pallet. Then a protective durable material is wrapped around it for protection of the products when it is put into the overhead storage area.
